

Unified Analytics Platform for Bahrain

Supporting Vision 2030 through Smart Governance

Presented by Visium Technologies

Executive Summary

Visium Technologies proposes a **unified AI-driven analytics platform** powered by TruContext graph analytics engine to support Bahrain's Vision 2030.

Key Value Proposition

Transform siloed government data into a **National Context Graph** that enables real-time, relationship-driven insights across sectors.

This solution delivers real-time, relationship-driven insights to support Bahrain's Vision 2030, enabling smart governance, regulatory compliance, and robust cybersecurity across sectors like smart cities, banking and financial institutions, utilities, health, and infrastructure.

The Challenge & Opportunity

⚠ Challenges

Siloed Data: Information trapped in separate government departments limits collaboration

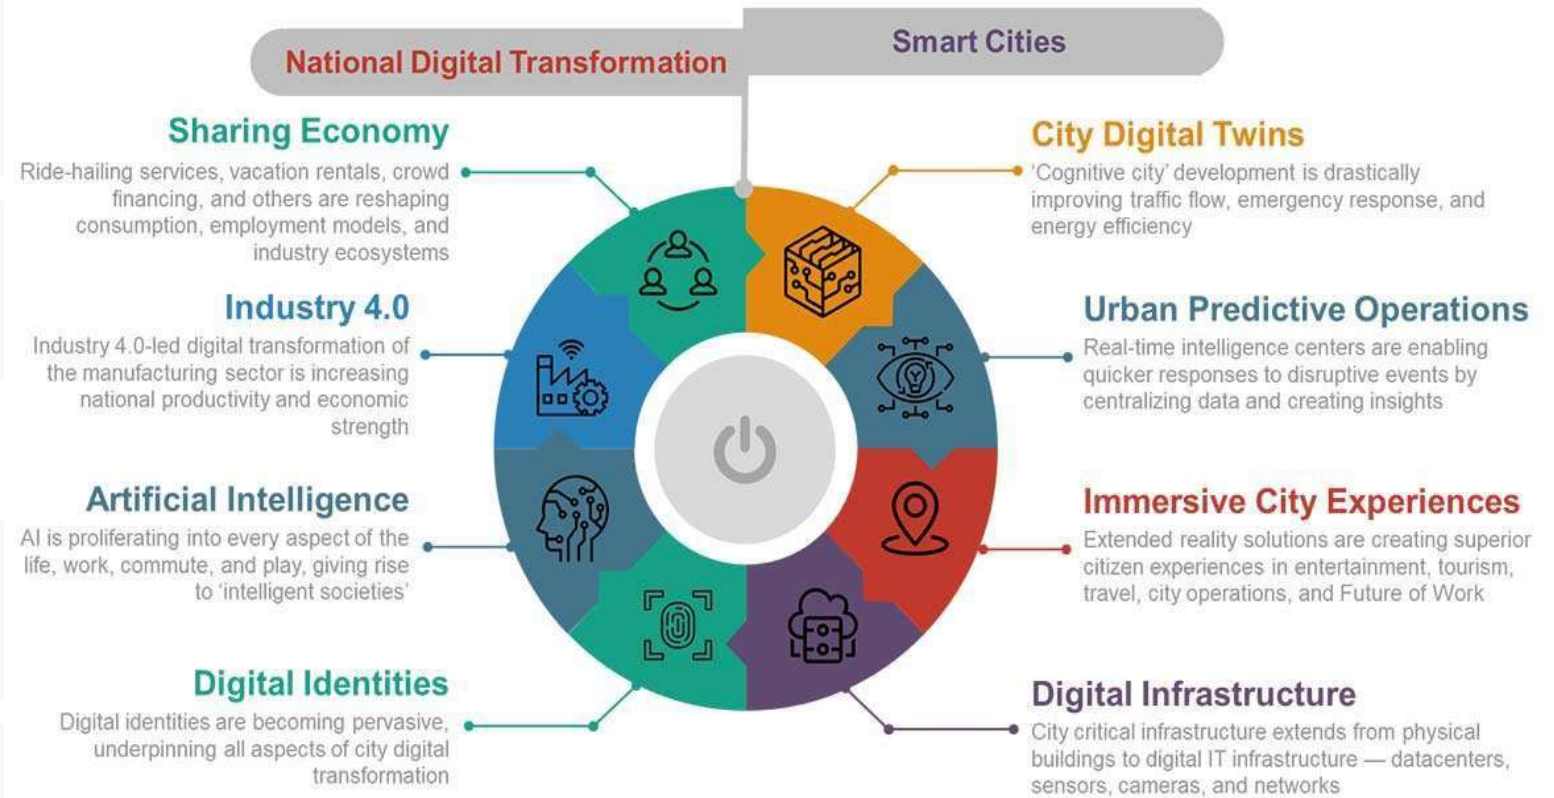

Cybersecurity Threats: Growing digital economy increases vulnerability

💡 Opportunities

Digital Transformation: Leverage AI and analytics for data-driven decisions

Cross-Sector Integration: Create unified view across government sectors

Eight Forces that will Shape the Future Cities

Our Solution

The **Unified Analytics Platform** powered by TruContext transforms siloed data into a comprehensive **National Context Graph**.

Connected Data

Maps relationships across people, assets, and events from multiple departments into a single interactive view

AI-Powered Insights

Leverages artificial intelligence to identify patterns and predict future trends

Real-Time Dashboard

Provides decision-makers with instant access to actionable information

Top Priority Use Cases

Cybersecurity Protection

Visualizes users, devices, network events, and threats in a single interactive graph, enabling real-time anomaly detection.

Strengthens Bahrain's cybersecurity posture, protecting critical infrastructure.

Smart Traffic Management

Maps real-time traffic patterns and congestion nodes, enabling AI- driven rerouting and forecasting.

Reduces congestion in urban centers like Manama and Muharraq.

Public Health Monitoring

Models regional health patterns, resource allocation, and population health trends in real time.

Enhances ability to predict and respond to health crises.

Top Priority Use Case – Cybersecurity Protection

Cybersecurity Protection

Visualizes users, devices, network events, and threats in a single interactive graph, enabling real-time anomaly detection.

Strengthens Bahrain's cybersecurity posture, protecting critical infrastructure.

TruContext visualizes users, devices, network events, and threats in a single interactive graph, enabling real-time anomaly detection and lateral movement tracking.

Benefit: Strengthens Bahrain's cybersecurity posture, protecting critical infrastructure and aligning with its digital hub ambitions. The Ministry of Interior can use this to map cyber-physical risks, reducing threat response times.

Why Prioritized: As Bahrain advances its digital economy, robust cybersecurity analytics are critical to safeguarding sensitive data and ensuring trust in digital systems.

Top Priority Use Case – Cybersecurity Protection

Quantifiable Benefits to Bahrain

1. Cybersecurity Protection

Reduced Incident Response Time: By visualizing cyber-threats and anomalies in real time, incident response times could fall from **weeks/days to hours/minutes**, cutting damage costs.

Benchmark: Studies show faster detection/response reduces **cyber breach costs by 30–50%**.

For Bahrain: If the average cost of major cyber incidents is \$2–3M, savings per year could reach **\$20–30M+** across government and financial institutions.

Top Priority Use Case – Smart Traffic Management

Smart Traffic Management

Maps real-time traffic patterns and congestion nodes, enabling AI-driven rerouting and forecasting.

Reduces congestion in urban centers like Manama and Muharraq.

TruContext maps real-time traffic patterns and congestion nodes using TruContext graph structures, enabling AI-driven rerouting and forecasting for events like accidents or construction.

Benefit: Reduces congestion in urban centers like Manama and Muharraq, improving citizen mobility and supporting Bahrain's smart city initiatives.

Why Prioritized: Traffic management is a pressing challenge in Bahrain's growing urban areas, directly impacting economic efficiency and quality of life.

Top Priority Use Case – Smart Traffic Management

Smart Traffic Management

Reduced Congestion Costs: AI-driven routing can cut travel delays by **10–20%**.

Economic Impact: Traffic congestion costs are typically **2–5% of GDP** in urban economies. For Bahrain (~\$50B GDP), that's ~\$1–2.5B annually.

A **10% reduction** in congestion → potential savings of **\$100–250M per year**.

Fuel & Emission Reductions: Smoother flows cut fuel waste by **5–10%**.
With ~300,000+ vehicles, savings could be **10–20 million liters of fuel annually** (~\$10–15M + lower emissions).

Public Satisfaction: Reduced travel time directly improves commuter productivity and quality of life.

Top Priority Use Case – Public Health Monitoring

Public Health Monitoring

Models regional health patterns, resource allocation, and population health trends in real time.

✓ *Enhances ability to predict and respond to health crises.*

TruContext models regional outbreak patterns, resource allocation, and population health trends in real time, providing actionable insights for healthcare planning.

Benefit: Enhances the Ministry of Health's ability to predict and respond to health crises, improving resource efficiency and public safety.

Why Prioritized: Post-COVID-19, Bahrain's focus on healthcare resilience makes this use case vital for proactive public health management.

Top Priority Use Case – Public Health Monitoring

Public Health Monitoring

Faster Detection of Outbreaks: Predictive health analytics reduce epidemic response time from weeks to days.

Benefit: Early response can lower outbreak costs by **30–40%**.

Example: During COVID-19, Bahrain spent hundreds of millions on emergency response. Advanced monitoring could have reduced that by **tens of millions**.

Optimized Resource Allocation: Real-time demand forecasting reduces hospital overcapacity/shortages.

Efficiency gains of **5–10% in healthcare spending**, translating to **\$50–100M annually**.

Public Safety & Trust: Stronger healthcare preparedness improves long-term citizen well-being and resilience.

Additional Applications

Beyond the priority use cases, our platform enables additional high-impact applications across sectors:

Water Analytics & Leak Detection

Links pipeline data to detect leaks and degradation via graph analytics, potentially **reducing water losses by up to 20%** for EWA.

Energy Grid & Renewable Integration Monitors solar, battery, and grid performance using graph relationships, supporting Bahrain's **10-15% renewable energy target by 2035**.

Construction & Infrastructure Monitoring Models project dependencies to forecast delays and risks, ensuring **timely delivery of infrastructure projects** for the Ministry of Works.

Additional Applications

Utilities & Infrastructure

Water Analytics (Leak Detection):

Bahrain loses ~20–25% of water in distribution (non-revenue water).

Graph analytics could reduce losses by **up to 20%**, saving **millions of cubic meters annually**, worth **\$10–20M per year**.

Energy Grid Optimization:

Better integration of renewables helps meet the **10–15% renewable target by 2035**.

Avoiding inefficient balancing could save **5–10% in grid costs** (~\$25–50M/year).

Construction Monitoring:

On-time project delivery reduces overruns, typically **10–15% of project value**.

For Bahrain's multi-billion-dollar infrastructure investments, potential annual savings are in the **hundreds of millions**.

Total Potential Economic Benefit

If we sum across the major initiatives:

Cybersecurity: \$20–30M+ saved annually (plus avoided mega-losses).

Traffic Management: \$100–250M saved annually.

Healthcare/Public Health: \$50–100M efficiency gains, plus reduced crisis costs.

Utilities + Energy: \$35–70M per year.

Cross-Sector Efficiency: \$20–50M/year.

→ **Estimated Direct Annual Quantified Benefit: \$225–500M+**

→ **Indirect / Risk Averted Value (cyber attack prevention, pandemic cost avoidance, infrastructure overruns avoided): Hundreds of millions more per year.**

Alignment with Vision 2030

Visium Technologies' platform directly supports Bahrain's national priorities and Vision 2030 goals:

Smart Governance: Enabling data-driven decisions across ministries through real-time analytics

The platform creates a foundation for **sustainable growth** and positions Bahrain as a **regional leader in digital intelligence**

Alignment with Vision 2030

Visium Technologies' platform directly supports Bahrain's national priorities and Vision 2030 goals:

 **Smart Governance:** Enabling data-driven decisions across ministries through real-time analytics

Cybersecurity: Strengthening threat detection to safeguard Bahrain's digital hub ambitions

Regulatory Compliance: Automating reporting for labor laws and financial regulations

 **Environmental Goals:** Supporting renewable energy integration and resource management

The platform creates a foundation for **sustainable growth** and **positions Bahrain as a regional leader in digital intelligence**

Implementation Timeline

Phase 1: Pilot

Sep 2025 – Apr 2026

Deploy in Manama/Muharraq,
focusing on cybersecurity, traffic,
and public health analytics

Phase 2: Sector Expansion

May 2026 – Dec 2026

Extend to utilities, health, and
interior ministries with cross-sector
dashboards

Phase 3: National Integration

Jan 2027 – Aug 2027

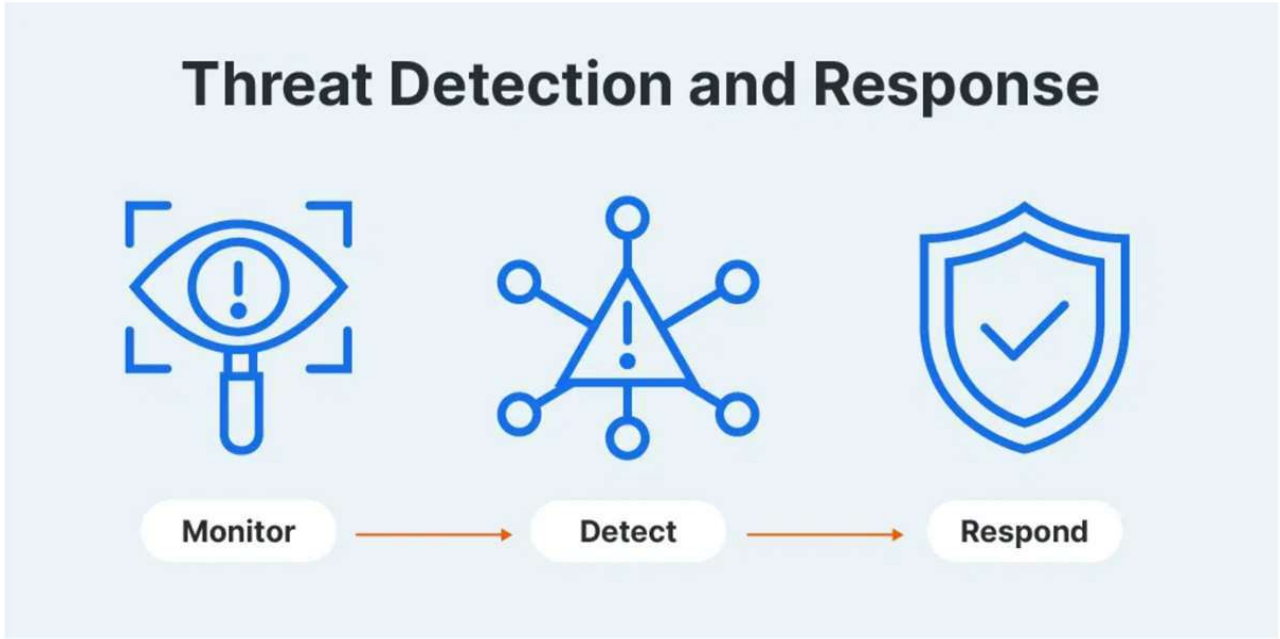

Centralize into a secure national instance
with inter-agency knowledge graph

Why Graph Analytics

Visium Technologies brings proven expertise and production-ready technology to support Bahrain's digital transformation:

- ✓ **Proven Track Record:** Graph analytics are trusted by NASA and the U.S. Department of Defense for critical infrastructure protection
- ✓ **Global Leader: Built on Neo4j**, the world's leading graph database technology
- ✓ **Secure & Scalable:** Designed specifically for government and critical infrastructure applications

Technology Readiness Level (TRL):

Thank You
